

Coding Exercise

Problem Statement:

Read the text from the file - "AmericanAirlinesGroup.txt".

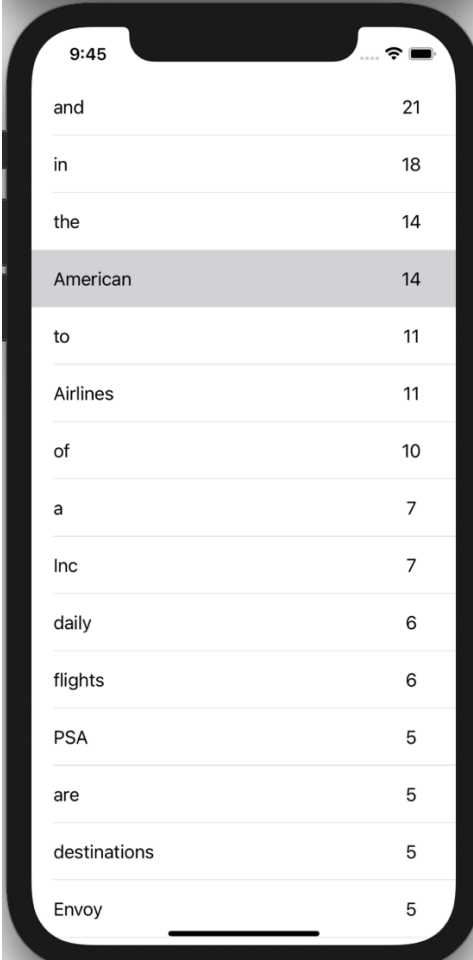

Get the count of each word in the file (excluding empty spaces and new lines) and display each word in a TableView along with the count of each word.

- Show the table data with the highest count first
- Write unit tests to cover the code you have written

Bonus Point:

- Make the table view sortable by the count

Expected Output:

and	21
in	18
the	14
American	14
to	11
Airlines	11
of	10
a	7
Inc	7
daily	6
flights	6
PSA	5
are	5
destinations	5
Envoy	5
